

BEHAVIORAL SAFETY

INNOVATION NEVER RESTS

LIGATURE RESISTANT SINK AND TRAP COVER

#CS730/TC720

Installation, Maintenance & Operation Instructions

Behavioral Safety designed the CS730 solid surface sink to meet the latest behavioral standards of ligature and aesthetic design. The CS730's design allows for mounting to either the center of a wall or the left and right corners of a bathroom. The sink's large footprint creates a natural "counter space" not commonly available in other sink designs. The sloped sides, backsplash, and trap cover deter ligature, and our mounting system is ideal for both retrofit into existing spaces or newly designed bathrooms.

The CS730 is designed to be paired with our TC720 ligature resistant trap cover, with an incorporated access door for repairs and inspection without removing the entire trap cover. The sink and interlocking trap cover were explicitly designed to support additional weight and, when installed per the manufacturer's instructions, meet ADA height and clearance specifications. The CS730 accepts all standard faucets as well as all BSP patented faucets. The CS730 includes a ligature resistant drain, tamper-resistant mounting hardware, and a robust mounting plate in our sink kit for a complete installation package.

Specifications

- Ligature resistant drain & stainless steel tamper-resistant hardware
- Accepts standard 4" center set faucets
- CS730 meets CSA B45.5/IAPMO Z124 Plastic Plumbing Fixtures.
- Mounting to a center of wall or in left & right corners
- Anti-fungal solid surface construction
- Trap cover with removable access door
- Supports 500 lbs of downforce
- ADA compliant
